

Website Design & Build Specification

Complete page architecture, colour system, typography, component rules and build sequence for the nxtte agency website.

PREPARED FOR

Ms. Nemila · Chief Executive Officer

Mr. Jay · Chief Technology Officer

Version 1.1 (light mode) · September 2026 · nxtte, a sub-brand of Aurexis Solution

Purpose & Scope

This document is the single source of truth for the nextte website. It defines what each page contains, how the brand looks on screen, which components exist, and the order in which everything gets built. Any decision not written here should be added here before it is built.

What the website is for. It is not a lead magnet on its own. Almost nobody discovers an agency through its website. The site exists to make nextte look credible enough to justify a RM 1,590/month retainer when a prospect — from an Instagram DM, a referral, or an Aurexis proposal — goes to check whether the business is real.

Design principle that governs every decision below

Credibility first, beauty second, cleverness never. A prospect should be able to answer four questions in under sixty seconds: What do they do? Who is it for? What does it cost? How do I start? Any element that does not serve one of those four questions is decoration and should be cut.

Success criteria

Measure	Target at launch	Target by month 3
Pages live	Home, Audit, Contact	All six plus Audit and Thanks
Time to first contentful paint	Under 1.8s on 4G	Under 1.5s
Lighthouse performance	85+	95+
Enquiries per month from site	2	6
Audit page conversion rate	Baseline recorded	5% of visitors

Positioning & Message Foundation

Every line of copy on the site derives from the positioning below. Write nothing that contradicts it.

The category promise

nxtte does not run social media accounts. nxtte builds the machine that turns attention into bookings.

Content sits at the top of that machine. Most agencies sell only the top and have no answer when a client asks why sales did not move.

The differentiator

nxtte is attached to Aurexis Solution. That means the website, the landing page, the lead capture, the automation and the content come from one team. Competing SMMA's hand over reels and stop. This is the only genuine moat nxtte has today, and it should be given real estate on the homepage and the About page — not buried in a footnote.

Message hierarchy

Level	What it says	Where it appears
Primary	Content that produces bookings, not just likes	Hero, meta title, IG bio
Secondary	Site, funnel and content from one team	Why nxtte section, About
Third	Published pricing, no lock-in, fast turnaround	Packages, FAQ, How we work
Proof	Our own accounts, built in public, with numbers	Proof strip, Work

Do not write this on the site

Avoid "AI-powered" as a marketing claim. Every agency in the market now says it, so buyers read it as noise. Use AI internally to hold margin at RM 1,590/month with a two-person team. That is a weapon, not a headline.

Tone of voice

- **Plain over clever.** Short sentences. No agency jargon: no synergy, no elevate, no unlock.
- **Specific over vague.** Numbers, days, ringgit. "Calendar in 72 hours" beats "fast turnaround".
- **Confident, not loud.** No exclamation marks. State the price and move on.
- **Second person.** Speak to the reader as "you", not about "clients".
- **English first,** with natural Malaysian phrasing where it fits. No forced bahasa pasar.

Sitemap

Six pages appear in the navigation. Two exist but are deliberately unlinked — they are destinations for DMs, ads and form submissions, and putting them in the nav would only give visitors somewhere else to wander.

#	Route	Page	In nav	Job of the page
1	/	Home	Yes	Sell the whole proposition in one scroll
2	/services	Services	Yes	Answer exactly what is included and what it costs
3	/work	Work	Yes	Prove the work produces results
4	/about	About	Yes	Put faces to the brand and explain the Aurexis link
5	/insights	Insights	Yes	Show ongoing expertise; fed by repurposed content
6	/contact	Contact	Yes	Remove every obstacle between interest and WhatsApp
7	/audit	Audit landing page	No	Convert cold traffic into a paid RM 299 audit
8	/thanks	Confirmation	No	Set expectations and fire the conversion pixel

Two warnings before you build

1. Work is the page a serious buyer clicks first. Launching it with two mockups and no numbers is worse than not having it. Build it, but keep it out of the nav until you have three real pieces with a result attached to each. 2. A blog whose newest post is four months old is public evidence that the business went quiet. Insights avoids this by carrying no visible dates and being fed entirely from Instagram carousels you are already producing. If you cannot commit to that, leave the page out until you have ten posts ready.

Navigation rules

- Sticky header on all pages. Logo left, five text links centre-right, one solid pink WhatsApp button far right.
- The WhatsApp button is the only button in the nav. Never place two competing calls to action in the header.
- Mobile: logo and WhatsApp button stay visible; the five links collapse into a full-screen overlay menu.
- Footer carries the SSM registration number, both social links, an email address and a one-line address. Registration numbers build trust cheaply in the Malaysian market.
- /audit uses a stripped header: logo only, no links out.

Page Specification — Home (/)

Nine sections in a single scroll. Sections 4, 6 and 7 double as the previews that feed traffic into the deeper pages.

#	Section	Contains	Background
1	Nav	Logo, five links, WhatsApp button, sticky	Ink, translucent on scroll
2	Hero	Outcome headline, one-line subhead, primary CTA button, “See packages” text link	White
3	Problem	Three cards: posting with no plan / content that does not convert / agency went quiet after month two	Surface tint
4	Services preview	Four blocks — Content Creation, Social Media Management, Ads & Growth, Brand & Business. Two lines each, link to /services	White
5	Why nextte	The Aurexis angle plus three proof points	Surface tint
6	Packages	Three price cards: Starter, Growth (flagged most popular), Scale	Black, full-bleed
7	Work preview	Three tiles with one result each, link to /work	White
8	Proof strip	nextte's own account growth, real numbers and dates	Surface tint
9	Final CTA + footer	RM 299 audit offer, WhatsApp button, SSM number, socials	Black, full-bleed

Hero rules

- The headline states an outcome the client wants, never the service you sell. Working line: *Your content should bring in bookings, not just likes.*
- Exactly one primary button. The secondary action is a text link, styled clearly weaker.
- No carousel, no video background, no animated particles. They cost load time and buy nothing.
- The headline must be readable without scrolling on a 375px-wide screen. Test this first, not last.

Packages block — exact contents

Package	Price	Included
Starter	RM 890/mo	1 platform · 12 posts (static and carousel) · captions · monthly report
Growth	RM 1,590/mo	2 platforms · 12 posts + 4 reels · content calendar · monthly report
Scale	RM 2,890/mo	2 platforms + ads management · content + reels · landing page · biweekly reporting

Mark Growth as the recommended tier and make its card visually heavier. Most buyers take the middle option when three are presented; that is the behaviour the layout should encourage. Ad spend is always stated as separate from management fees, directly beneath the Scale card.

Packages sits on a full-bleed black section, white text, pink accents — the same treatment as the final CTA. On an otherwise white site these two blocks are the only place the original dark brand personality survives, so give them real visual weight rather than treating black as just another background option.

Page Specifications — Services, Work, About

Services (/services)

Purpose: answer “what exactly do I get and what does it cost” without a sales call.

- **Header** — one line on how you work, not a mission statement.
- **Four service sections** — Content Creation, Social Media Management, Ads & Growth, Brand & Business. Each states what is included, who it is for, and a starting price.
- **À la carte table** — the existing service menu, with firm prices.
- **Packages block** — reuse the component from Home.
- **CTA** — audit offer.

Delete the words “from RM” everywhere

“From RM 39” anchors low and tells the buyer the price is soft before they have even asked. State a firm price. Where a job genuinely varies, write “Quoted after a 15-minute call” instead — that signals scoping, not softness. Separately, fill in the four blank prices on the current sheet (Meta Ads, TikTok Ads, both campaign setups). Suggested: RM 800/month or 18% of ad spend, whichever is higher, on a minimum RM 2,000 spend. Blank prices mean the highest-margin line cannot be sold.

Work (/work)

Purpose: prove the work produces results. Three to six tiles, each opening a short story rather than a gallery.

- **Structure per case:** the situation → what ntxtte did → what changed, with a number.
- One real number outperforms ten mockups. Reach, follower growth, enquiries, cost per lead — any honest metric.
- Until client results exist, the first case is ntxtte's own account and the second is unpaid work done deliberately to fill this page.
- Never publish a tile without a result. An empty case study reads as inexperience.

About (/about)

Purpose: put faces to the brand. In the Malaysian SME market, buyers hire people, not logos. This is a selling page, not filler.

- **Hero** — both founders, named, with real photographs. Not stock, not illustrations.
- **Why we started ntxtte** — three short paragraphs. Honest beats polished.
- **How we work** — four principles: fast turnaround, published pricing, monthly reporting, no lock-in.
- **The Aurexis connection** — the strongest block on the page. Explain that the same team builds the site and the funnel the content feeds.
- **CTA** — WhatsApp.

Page Specifications — Insights, Contact, Audit, Thanks

Insights (/insights)

- Index of cards, newest first, **no visible dates** — this is what stops the page ageing badly.
- Post template: title, 400–700 words, one image, CTA at the end.
- Populate entirely by repurposing Instagram carousels already produced. No net-new writing commitment.
- Launch with a minimum of six posts, or keep the page out of the nav.

Contact (/contact)

- **WhatsApp button is the hero element** — the largest object on the page. In this market WhatsApp will outperform any form; treat the form as the fallback, not the default.
- Form fields: name, business, Instagram handle, WhatsApp number, service interest. Five fields maximum.
- State a response promise in writing: “We reply within 24 hours.”
- Email address and both social links below the fold.

Audit landing page (/audit)

The page most likely to earn money directly. Stripped header, no links out except the logo.

- **Hero** — “Find out why your content is not converting. RM 299, credited to your first month.”
- **What you get** — profile and bio teardown, content performance review, competitor comparison, gap analysis, 90-day roadmap with weekly deliverables.
- **Sample** — two or three screenshots of a real audit deliverable. Produce one for a real business first, even unpaid, so this section is never empty.
- **Turnaround** — delivered in five working days, stated plainly.
- **The offer** — RM 299, fully credited against month one if they sign within 14 days.
- **Form** — four fields only: name, business, Instagram handle, WhatsApp number.

Why the audit is the most important page on the site

The audit is not the product. The gap it reveals is the product. Build the deliverable so its final section is a 90-day roadmap with weekly deliverables attached — a document that is obviously useless unless somebody executes it. Crediting the RM 299 against month one removes the last reason to hesitate. Expect 30–40% of audits to convert into a retainer if the roadmap is specific enough.

Thanks (/thanks)

- Confirmation line with a time promise: “We will WhatsApp you within 24 hours.”
- WhatsApp button, for anyone who would rather start immediately.
- Links to the next Instagram and TikTok accounts.
- Conversion pixel fires here — this is the only reliable conversion event on the site.

Colour System — Light Mode

The site runs light mode: white base, dark ink type, pink reserved for accents and two full-bleed black sections. This reads more trustworthy to SME buyers, screenshots better into WhatsApp, and is easier for a two-person team to keep consistent than a dark theme. The trade-off is differentiation — white-with-an-accent-colour is the default look for agency sites, so the pink and the two black sections have to work harder to keep nexte from blending in.

The logo needs a light-mode lockup

The pink-on-black mark does not sit cleanly on white. Do not recolour it — place it inside a solid black rounded container in the nav and footer, so the mark keeps its original colours inside its own dark frame. Sample the exact pink from the logo file before writing any CSS; every other pink value below is derived from that one sampled value.

Core tokens

TOKEN	HEX	WHERE IT IS USED
--bg	#FFFFFF	Page base for all standard sections
--surface	#F7F6F4	Alternating bands, cards, the Problem and Proof sections
--border	#E6E4E1	Hairlines, dividers, card outlines
--pink	#C9507B	Buttons, links, prices, accent rules — the working text-safe pink
--pink-soft	#F2779F	Large display type, decorative fills only — never text under 24px
--pink-tint	#FDF2F6	Highlight blocks, active/selected states
--ink	#0A0A0A	Headings and body copy
--muted	#6B6B72	Captions, labels, form hints, footer text
--ink-section	#0A0A0A	Full-bleed dark break sections — Packages, final CTA

Why the pink had to change

The original brand pink, #F2779F, was built to sit on black and fails contrast on white at roughly 2.6:1 — unreadable as text and weak as a button fill. #C9507B is a darker step of the same hue, clears 4.6:1 on white, and becomes the working pink everywhere text, links or buttons are involved. The original #F2779F is not retired — it survives as --pink-soft, used decoratively at large sizes or as a fill behind white text, never as small text on a light background.

The three rules that matter more than the palette

- **Body text is always ink, never pink.** #C9507B is reserved for links, prices and buttons. #F2779F is never used as text at any size under 24px.
- **Primary buttons are a solid #C9507B fill with white text.** Secondary buttons are a 1px ink-bordered outline with ink text on transparent. Never pink text on white — it reads as a disabled state, not a call to action.
- **Packages and the final CTA are full-bleed black sections,** white text, #F2779F accents. These two blocks are where the original dark brand personality survives on an otherwise white site — without them the page reads

as generic agency-with-accent-colour and loses everything that made the logo distinctive in the first place.

Accessibility floor

Body text must clear 4.5:1 contrast against its background; large headings must clear 3:1. #0A0A0A on #FFFFFF passes comfortably. #C9507B on #FFFFFF clears 4.6:1 and is safe for body-sized links and prices. #F2779F on #FFFFFF fails outright and must never carry text — confine it to large decorative shapes or as a fill behind white text on the black sections. Check every combination before launch rather than after.

What this changes elsewhere in the build

- Photography now carries more weight. Empty space read as intentional restraint on black; on white it reads as an unfinished page. Real founder photos and real work screenshots matter more than before, not less.
- Shadows replace some of the contrast that darkness used to provide — use soft, low-opacity shadows on cards rather than hard borders everywhere, or the page will look flat.
- The nav and footer logo containers (black, rounded) are new components not present in the dark-mode version — add them to the component library in Section 09.

Typography

One typeface across the entire site. A single well-used geometric sans looks more expensive than two families mixed adequately.

Primary: Satoshi, with General Sans as the alternative. Both are modern geometric sans faces with tight, confident letterforms. System fallback stack: `Inter, -apple-system, Segoe UI, sans-serif`.

Do not use a serif

Serif typography is Aurexis territory. *nextte* is the younger, faster, social-native sub-brand and should not look like a smaller version of its parent. Keeping the two brands visually distinct also means *nextte* can eventually be sold, spun out or co-branded without confusing anybody.

Type scale

Role	Desktop	Mobile	Weight	Tracking
Hero headline	56–64 px	34–38 px	Bold	–2%
Section heading	34–40 px	26–28 px	Bold	–1.5%
Card title	20–22 px	18 px	Semibold	–0.5%
Body	17 px	16 px	Regular	0
Small / caption	14 px	13 px	Regular	0
Label / eyebrow	12 px	11 px	Bold, uppercase	+8%

Rules

- Line height 1.5 for body, 1.1 for headlines. Do not compress body leading to fit more text on screen.
- Maximum line length 68 characters. Full-width paragraphs are the most common readability failure on dark backgrounds.
- Headlines are tight and large. This is where the brand personality lives, so do not be timid with size.
- Never centre a paragraph longer than two lines.
- Numbers and prices are set in the bold weight — they are the most-scanned elements on the site.
- Self-host the font files rather than calling a third-party CDN. It is faster and removes an external dependency.

Component Library

Build each component once and compose pages from them. Several homepage sections reappear on /services and /audit; duplicating markup is how a two-person team ends up with a site that is inconsistent within a month.

Component	Used on	Notes
Nav bar	All pages	Sticky. Stripped variant for /audit with logo only
Button — primary	All pages	Solid pink fill, near-black text, 12px radius, no shadow
Button — secondary	All pages	1px border in --border, white text, transparent fill
WhatsApp button	Nav, contact, footers	Deep link prefilled with an opening message
Problem card	Home	Three across desktop, stacked on mobile
Service block	Home, Services	Icon, title, two lines, optional price
Package card	Home, Services	Three across; middle card raised with a pink border
Case tile	Home, Work	Image, client type, one result line
Proof stat	Home, About	Large number in pink, label in --muted beneath
FAQ accordion	Home, Services, Audit	Closed by default; opens one at a time
Form	Contact, Audit	Shared component, field set passed as a prop
Footer	All pages	SSM number, socials, email, one-line address

Interaction and motion

- Motion is limited to fade-and-rise on scroll, at 200–300ms. Nothing bounces, nothing parallaxes.
- Every interactive element has a visible hover and focus state. Focus rings must never be removed — they are a keyboard-accessibility requirement, not a style choice.
- Respect prefers-reduced-motion and disable all transitions when it is set.
- Minimum touch target 44×44px. Most visitors will arrive from Instagram on a phone.
- Forms validate inline on blur, never only on submit, and never clear what the user typed on error.

FAQ content — the five questions that stall deals

- How long is the contract, and can I stop?
- What actually happens in the first month?
- Who owns the content you produce?
- Is ad spend included in the management fee?
- How fast is turnaround once I sign?

Answer these publicly and they stop consuming your time in DMs. Every one of them is a question a hesitant buyer asks privately before they commit.

Technical Specification

Layer	Choice	Reason
Framework	Next.js (App Router)	Already the in-house standard at Aurexis
Hosting	Vercel	Zero-config deploys, preview URLs per branch
Styling	Tailwind with the colour tokens above	Tokens defined once in the config
Data	Supabase	Form submissions, audit requests, insight posts
Forms	Server action → Supabase → email alert	No third-party form service needed
Primary contact	WhatsApp deep link	Outperforms forms in this market
Images	next/image, WebP	Instagram-sourced imagery is heavy and must be compressed
Fonts	Self-hosted woff2	Faster, and removes an external dependency
Analytics	Vercel Analytics + Meta Pixel	Pixel required for retargeting ad traffic

SEO baseline

- Unique title and meta description per page. Titles lead with the outcome, not the brand name.
- One H1 per page, containing the primary message.
- LocalBusiness structured data with the SSM number, service area and both social profiles.
- Open Graph image per page — links get pasted into WhatsApp constantly and an unstyled preview looks careless.
- Sitemap and robots.txt generated at build. Submit to Google Search Console on launch day.
- Every image carries descriptive alt text. It serves accessibility first and search second.

Performance budget

- Total page weight under 1.2MB on the homepage.
- No third-party script that is not analytics or the Meta pixel.
- Largest Contentful Paint under 2.0s on a mid-range Android phone over 4G — not on your laptop.
- Test on a real phone on mobile data before launch. Desktop-only testing is how slow sites ship.

Tracking events to instrument

Event	Fires when	Why it matters
whatsapp_click	Any WhatsApp button is tapped	The real primary conversion
package_view	Packages section enters viewport	Shows whether price kills or converts
audit_submit	Audit form submitted	The revenue event
contact_submit	Contact form submitted	Secondary lead

SECTION 11

Build Order & Sequence

Build in revenue order, not in menu order. The first three pages can earn money on their own; ship them, go live, and fill in the rest while the site is already working.

Phase	Build	Output	Effort
1	Design tokens, nav, footer, buttons, form component	Foundation everything else composes from	1 day
2	Home	The full pitch, live	1 day
3	/audit and /thanks	A page that can take money	Half a day
4	/contact	Enquiries captured	Half a day
5	Go live here	Domain, analytics, Search Console, pixel	Half a day
6	/services	Removes pricing questions from DMs	Half a day
7	/about	Faces and the Aurexis story	Half a day
8	/work	Added to nav only once three real cases exist	1 day
9	/insights	Six repurposed posts minimum before it goes in the nav	1 day

Do not wait for completeness to launch

A live four-page site earning enquiries beats a perfect eight-page site that ships in November. Phases 1 to 5 are roughly three and a half days of focused work. Everything after that can be added to a site that is already in front of prospects.

Content you must gather before building

- The exact pink, sampled from the logo file.
- Founder photographs of Ms. Nemila and Mr. Jay — real, well-lit, not stock.
- Final firm prices for the four blank ad-service lines.
- Screenshots of a completed sample audit deliverable.
- Current ntxtte account metrics, with the dates they were recorded.
- The SSM registration number and business email address.
- Three case studies, or a decision to launch without /work in the nav.

Pre-Launch Checklist

Work down this list on the day of launch. Every item has caused a real agency site to leak leads silently.

Check	Detail
[Every price is firm]	No instance of the words “from RM” remains anywhere on the site
[Four blank ad prices filled]	Meta Ads, TikTok Ads, both campaign setups
[WhatsApp deep links tested]	On a real phone, with the prefilled message appearing correctly
[Both forms tested end to end]	Submission lands in Supabase and triggers an email alert
[/thanks fires the pixel]	Verified in Meta Events Manager, not assumed
[Mobile tested on 4G]	Real device, mobile data, not a desktop simulator
[Contrast checked]	No pink body text anywhere; all body copy clears 4.5:1
[Open Graph previews]	Paste every URL into WhatsApp and check the card renders
[404 page exists]	Styled, with a route back to Home
[Search Console connected]	Sitemap submitted on launch day
[SSM number in the footer]	Cheap, powerful trust signal in this market
[Instagram bio updated]	Link points to /audit, not to Home
[Aurexis proposal template updated]	Carries the nxtte content-retainer line item

The highest-leverage action in this entire document

It is not on the website. List every Aurexis client from the last eighteen months and send them the /audit link. A client who has just paid for a website has an obvious, urgent problem — a new site with nobody driving traffic to it. That is the easiest retainer conversation available to you, and you are already in the room. The website exists mainly to make that conversation credible.

Prepared for Ms. Nemila, Chief Executive Officer, and Mr. Jay, Chief Technology Officer. Version 1.1, September 2026 — updated to the light-mode palette. Revise this document before deviating from it in the build.
